EDUCATION

- Ain Shams university** Cairo-Egypt
2022-2026
Computer and information sciences; GPA: 3.65
Courses: Operating Systems, Data Structures, Analysis of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases, Discrete Mathematics, Object-Oriented Programming (OOP), Data Structures.

SKILLS SUMMARY

- Languages:** Python, C++, C#, Java, Kotlin, Object-Oriented Programming (OOP)
- Frameworks:** TensorFlow, Keras
- Tools and platforms:** Git, Arduino, Android, Streamlit
- Soft Skills:** Leadership, Event Management, Public Speaking, Time Management, Content creation, Teaching skills, Planning

EXPERIENCE

- Information Technology Institute (ITI) - Android development trainee** Remote
Jul 2024 - Sep 2024
Student Developer (Internship)
 - Designed and developed **Mobile Applications** for the Android platform.
 - Utilized **APIs** and **SQLite databases** to integrate backend services and manage data storage efficiently.
 - Collaborated with cross-functional teams to gather requirements, plan features, and deliver high-quality applications within deadlines.
 - Implemented **MVVM** (Model-View-ViewModel) architecture to ensure clean, maintainable, and scalable code.
- Vice head of Mobile Application (Android branch leader) at MSP Tech Club - ASU** Sep 2024 - Present
Instructor (Apprenticeship)
 - Led a team of team leaders, assigning tasks and ensuring committee goals were met.
 - Created technical content, including tutorials and project guidelines, to support team learning.
 - Held regular meetings to discuss tasks with members, solve issues, and provide feedback.

PROJECTS

- Fos Operating System using C** : FOS is an educational OS for Ain Shams University Operating Systems Course CSW355, forked and refactored from MIT Operating Systems Lab 6.828, It has been actively developed and extended with new features.
- Meal Recipes Mobile Application (Android development, Kotlin, Design pattern, Retrofit, Room Database, MVVM Architecture)**: Foodii is a user-friendly app designed for food lovers who want to explore, search, and save recipes with ease. Features include:(Recipe search by category, Personalized favorites, Recipe videos and ingredient lists, Random "Recipe of the Day", Intuitive, smooth UI, Seamless meal planning options). Developed with Implementing complex backend services with API integration, Work with Android fragments, RecyclerViews, ViewModels, and Material Design components, Adopt clean architecture patterns such as MVVM for a scalable, maintainable app.
- Water Quality Prediction System**: This project is a data analysis and machine learning project focused on predicting water potability based on various water quality parameters. The project is implemented in a Jupyter Notebook and involves several steps, including data loading, exploratory data analysis, data visualization, and machine learning model training and evaluation. The project is deployed using Streamlit platform.
- IConnect Social App (JAVA, Object-Oriented Programming (OOP))**: Social media application by using Object-Oriented Programming principles. Designed classes for users, posts, comments, and messages. Focused on creating a scalable and maintainable codebase, enhancing my understanding of OOP concepts. The User account can make Conversation, Mention, send friends request, comment, like, receive notifications and write posts.

HONORS AND AWARDS

- Information Technology Institute (ITI) - Android development trainee 
- 3rd place in the satellite competition (SATC-4) 
- 3rd place Beyond the Earth Hackathon 
- Best Artificial Intelligence member and instructor 

VOLUNTEER EXPERIENCE

- Artificial Intelligence instructor at RoboTech ASU student activity** 2023 - 2024
Developed and delivered AI workshops for students.
- Public Relations member and Hosting team leader at MSP Tech Club - ASU**
Organized events, conducted workshops and created content for social media posts and event promotions. 2023 – 2024
