Professional Summary

Backend Engineer passionate about DevOps and building scalable, automated, and cost-efficient cloud architectures. Experienced in designing resilient backend systems, optimizing infrastructure, and implementing full CI/CD automation. Focused on reducing deployment friction, improving system reliability, and delivering measurable performance gains across distributed applications.

Education

Faculty of Science, Assiut University

Bachelor of Computer Science

Oct 2021 – Jun 2025

GPA: 3.3 / 4.0 — Assiut, Egypt

Certifications

AWS Certified Solutions Architect – Associate

Oct 2025

AWS Certified Cloud Practitioner

Jun 2025

Projects

Serverless E-Commerce Platform [[GitHub Repo](#)]

Sep 2025 – Oct 2025

- Reduced infrastructure costs by **70%** by migrating from EC2-based microservices to a **serverless architecture** with AWS Lambda, API Gateway, and DynamoDB.
- Automated infrastructure and CI/CD using **Terraform** and **GitHub Actions**, cutting manual deployment effort by **90%** with blue/green deployments.
- Improved API response time by **45%** using **ElastiCache (Redis)** and achieved **zero downtime** while handling **5K concurrent requests** through **CloudWatch** and **Auto Scaling**.
- Deployed a **FastAPI-based backend** in containerized Lambda functions integrated with **RDS Proxy**, **SNS/SQS**, and **Step Functions** for event-driven workflows.

Easy Deploy Platform (Graduation Project) [[GitHub Repo](#)]

Mar 2025 – May 2025

- Built a **DevOps automation platform** that deploys GitHub-hosted apps to AWS with **zero manual steps**, reducing deployment time by **85%**.
- Automated provisioning with **Terraform** and **Ansible**, improving reliability and consistency across environments to achieve **99.9% uptime**.
- Implemented **GitHub Webhooks** and Docker/ECS pipelines by using **CodePipeline** and **CodeBuild** for continuous delivery and real-time deployments.

Programmer's Social Hub | .NET Microservices Platform [[GitHub Repo](#)]

Sep 2024 – Oct 2024

- Built a microservices-based developer collaboration platform using ASP.NET Core, C#, and JavaScript for code sharing and interaction.
- Developed a responsive frontend with Next.js, TypeScript, and Tailwind CSS, integrating APIs via Axios.
- Applied SOLID principles and design patterns for scalable and maintainable backend services.
- Implemented inter-service communication using gRPC and RabbitMQ for asynchronous event processing.
- Deployed containerized microservices using Docker and Kubernetes, following DevOps best practices.

Technical Skills

Backend: FastAPI, Django, ASP.NET Core, Node.js (Express.js, NestJS)

Programming: Python, C#, JavaScript/TypeScript, Go, Bash

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Cloud & DevOps: AWS (EC2, Lambda, ECS, ECR, S3, RDS, CloudFront, CloudWatch, IAM, VPC), Docker, Kubernetes, Terraform, Ansible, GitHub Actions, Jenkins, Linux

Architecture & Design: Microservices, RESTful APIs, Event-Driven Systems, System Design, Design Patterns, SOLID Principles
