

Candidate Feedback - Frontend developer

Overall Evaluation:

- The candidate has solid JavaScript experience and multiple React projects.
- Academic background in computer science provides strong algorithmic foundation.
- Demonstrates ability to build fullstack applications with FastAPI and React.
- Lacks direct experience with Angular and modern CSS frameworks.
- Limited evidence of converting Figma designs into production UI.

Strengths:

- Proficient in JavaScript and React.js with realworld project implementations.
- Experience with Git and collaborative development workflows.
- Strong problemsolving skills shown through AI competitions and hackathons.
- Ability to integrate backend APIs and handle data fetching in frontend code.
- Good understanding of version control and deployment using Docker.

Skill Gaps:

- No proven experience with Angular or comparable SPA framework.
- No mention of using Bootstrap, Tailwind CSS, or similar UI libraries.
- Limited exposure to translating Figma or other design tools into code.
- Minimal focus on responsive design techniques and crossbrowser testing.
- Lack of explicit work with REST API consumption patterns in frontend code.

Improvement Plan:

- Complete a short course or tutorial on Angular fundamentals and build a sample app.
- Practice using Bootstrap or Tailwind by recreating existing UI components from Figma.
- Add a portfolio project that showcases converting Figma mockups into responsive pages.
- Study best practices for consuming REST APIs in React, including error handling and caching.
- Participate in frontend focused opensource projects to gain feedback on UI quality.
