 [raheeq-ayman](#) |  [Ra7eeq1912005](#) |  [raheeqramadan](#)

Cairo, Egypt

SKILLS

- **Programming Languages:** C#, C++, Python, Java, Scala, HTML, CSS, TypeScript, JavaScript, SQL
- **Web Technologies:** Maven, SpringBoot, Flask, .NET, Servlet, Quarkus jax-rs
- **Database Systems:** SQLServer, MySQL, PostgreSQL, SQLite
- **Data Science & Machine Learning:** PyTorch, TensorFlow, OpenCV, SKlearn, NLTK
- **Testing Technologies:** AssertJ, Mockito, Postman

EXPERIENCE

- **Fawry Intern**  July 2025 - September 2025
Software Developer Full-Stack-JAVA Smart Village, Egypt
 - Utilized design pattern techniques, test-driven development (TDD), and Java technologies to build customized web applications within a professional environment, collaborating with mentors in software development, software testing, and DevOps.
- **DEPI Intern**  July 2025 - January 2026
Software Developer Full-Stack .NET Cairo, Egypt
 - Studying emerging technologies in engineering, Microsoft SQL Server, and the .NET Framework to build real-world projects enhanced with AI, creating innovative applications that stand out from existing solutions and remain competitive in the market.

EDUCATION

- **University of Ain Shams** Sept 2022– May 2026
Bachelor of Computer Science Cairo, Egypt
 - GPA: 3.46/4.0 (Ain Shams University)
 - Coursework: Computer Architecture, DataBase, Network, Object Oriented Programming, Data Structure, Software Engineering, Concepts of programming languages, Pattern Recognition, Natural Language Processing, Logic Design, Analysis and Design of Algorithms.
- **Obour STEM School** Sept 2019– May 2022
High School of Science Technology Engineering and Math City, Country
 - GPA: 3.8/4.0 (Obour STEM School)

PROJECTS

- **Cinema-Secure-Website** 2023
Tools: Python, Flask, SQLite, HTML, CSS 
 - Designed a secure web application with role-based access control, allowing admins to add, modify, and remove movies. Integrated a profit tracking system, enabling real-time revenue monitoring for business insights.
 - Developed an intuitive user interface where customers can browse, view, and book movies securely. Implemented authentication and data encryption to protect user information.
- **FOS-Operating System** 2024
Tools: C, Assembly 
 - Designed and implemented kernel and user heap memory allocation utilizing the first-fit strategy, achieving an 85% improvement in allocation speed and a 25% reduction in memory consumption through optimized data structures.
 - Developed an advanced page fault replacement mechanism leveraging the Nth clock algorithm, resulting in a 50% increase in handling efficiency and a 10% reduction in page faults compared to the FIFO approach.

• **Chronicles-of-Exoplanet-Exploration**

2024

Tools: Python,Flask, React.js, TensorFlow, HTML, JavaScript, CSS

- Developed an AI-powered educational platform that engages users in exoplanet discovery through interactive quizzes and personalized learning. Designed a Planet Personality Test to match user preferences with exoplanet characteristics, making space science more relatable.
- Implemented an Llama-based chatbot to provide real-time answers on exoplanets, integrating NASA datasets for accurate insights.

• **Steam Video Game Sales Analysis**

2025

Tools: Python ,Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebook

- Conducted a large-scale data analysis project on 69K+ Steam games integrating data from base games, DLCs, demos, and sales records.
- Designed an end-to-end ML pipeline including data cleaning, feature engineering, feature selection, and model evaluation.
- Implemented multiple feature selection techniques (Pearson/Spearman correlation, Mutual Information, Random Forest importance, Lasso, RFE) to identify most influential variables.
- Developed regression models to predict copies sold, achieving $R^2 = 0.91$ on test data with Random Forest (best-performing model).
- Built a multi-class classification system to categorize games into sales tiers (Bronze–Platinum), achieving up to 90.7% accuracy using Gradient Boosting.

COMPETITION ACHIEVEMENT

• **MTC-AIC3 Brain-Computer Interface Challenge**

June 2025

Military Technical College

- Built a complete end-to-end BCI pipeline for Motor Imagery (MI) and SSVEP EEG classification.
- Achieved up to 70% accuracy in MI and 40% in SSVEP tasks.
- Designed and evaluated 8+ models, including EEGNet, DeepConvNet, BiLSTM, and Transformer-based (SSVEPFormer).
- Applied advanced EEG feature extraction methods such as FBCSP, FBCCA, and Higuchi Fractal Dimension.

LEADERSHIP EXPERIENCE

• **Computer Vision Director**

Jan 2024– Oct 2025

APPLAi Student Chapter

- Led a team of 17 mentors in the APPLAI Winter Workshop’25, delivering Computer Vision research and training to 200+ trainees through hands-on projects and advanced AI methodologies.
- Led a team of 15 NLP mentors during the Generative AI Summer Training’25 at Ain Shams University, delivering training to 200+ trainees through classroom assignments, advanced AI model development, and Kaggle competitions.

CERTIFICATIONS

• **Structured Programming Contest**

2023

• **cyberus Training**

2023

• **Pattern Recognition Contest**

2025
