Education

Bachelor's Degree in Computer and Information Sciences

2022 – 2026

Ain shams University

- **Relevant Coursework:** Data Structures & Algorithms, (OOP), Software Engineering, Operating Systems, Computer Networks, Database Systems, Artificial Intelligence, Machine Learning, Neural and Deep Learning. **(CGPA = 3.63)**

Profile

Final-year Computer Engineering student and **Full-stack Developer** specializing in the **MERN stack**. Experienced in building complex, real-time web applications with a focus on integrating advanced cloud services and background task orchestration. Possess a solid foundation in **Software Engineering & AI**, with additional hands-on experience in the MEAN stack. A proactive **problem-solver** with a strong focus on algorithmic logic and continuous skill development. Dedicated to bridging the gap between intricate backend logic and intuitive, high-performance frontend experiences through clean, scalable code.

Experience

Mean-Stack Web Development - NTI

2025/08 – 2025/09 | online

Completed the NTI Summer Training Program in MEAN-Stack Web Development (120 hours), covering JavaScript, TypeScript, Node.js, Express.js, Angular, and MongoDB, with a final full-stack project (MyateryCase). Also gained soft skills in freelancing and portfolio development.

Skills

• Programming Languages:

- C++, C#, Java, JavaScript, TypeScript, SQL, Python, Scala.

• Core CS:

- Data Structures & Algorithms, OS, OOP.
- Machine Learning, NLP, AI, DL.
- UI/UX Principles.

• Web Development:

- React.js, Angular, Node.js, Express.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap.

• Tools & Databases

- MongoDB, Git/GitHub, Clerk, ImageKit, Inngest, Postman.

Projects

TasNet | Full-Stack Social Media Platform

2025/12 – 2026/01

- **Full-Stack Development:** Built a responsive social app using **MERN stack** and **Tailwind CSS**, featuring a dynamic feed and interactive user profiles.
- **Real-time & Background Tasks:** Implemented live chat via **SSE** and a 24h auto-expiring stories system using **Inngest** background jobs.
- **Auth & Media:** Integrated **Clerk** for secure OAuth/Email authentication and **ImageKit** for optimized cloud media management.
- **Architecture:** Leveraged **Redux Toolkit** for state management and **Nodemailer** for automated email notification workflows.
- [Live Demo [↗](#)] [GitHub [↗](#)]

Mystery Case | Full-Stack Game Website [GitHub] [↗](#)

2025/09 – 2025/10

Graduation project for the NTI Mean-Stack summer training

- **Full-Stack Development:** Built an interactive detective game platform using the **MEAN stack** (Angular, Node.js, Express, MongoDB).

- **Game Logic:** Developed dynamic **mystery-solving game** mechanics where users investigate clues and submit solutions stored securely in MongoDB.
- **Admin Dashboard:** Engineered a real-time analytics dashboard to monitor user activity, case progress, and platform statistics.
- **Architecture:** Implemented a scalable architecture with TypeScript, ensuring type safety and smooth performance for complex game states.

Machine Learning: Steam Game Sales Prediction | [2nd Place Winner]

2025/04 – 2025/05

Got the 2nd place in the Machine Learning course competition

- **Predictive Modeling:** Developed regression and classification models to categorize games into sales tiers, achieving **90% R²** and **85% accuracy**.
- **Deployment:** Built a web interface using **FastAPI** to deliver real-time predictions with an optimized pipeline (<300ms latency).
- **Tech Stack:** Python (Scikit-learn, Pandas), FastAPI, HTML/CSS/JS.

Map Routing (DSA)

2025/04 – 2025/05

- **Route Optimization:** Implemented **Dijkstra's Algorithm** to calculate the shortest path between locations under specific travel constraints.
- **Visualization:** Built a graph construction and visualization tool using **C#** and System.Drawing to represent large-scale datasets.

FOS

2024/10 – 2024/12

FCIS Operating System

- **System Development:** Built a lightweight OS in **C** with process management and resource sharing.
- **Memory Management:** Implemented dynamic allocators, kernel/user heaps, and shared memory.
- **CPU & Sync:** Designed a custom scheduler and implemented synchronization using **Sleep Locks**.

Planto | Frontend

2024/08 – 2024/09

Won First place in the Frontend Summer Training Competition

- **Design:** Developed a responsive e-commerce plant store using HTML, CSS, JS, and Bootstrap.
- **Interactive Features:** Integrated 3D image displays and a secure admin panel for content management using local storage.

Awards

Second place

2025/07

Machine learning course competition in FCIS

- A machine learning project that predicts Steam game sales based on features like genre, price, and user ratings, and was awarded **second place** among all submitted projects.

First place

2024/09

Frontend Summer Training Competition

- Won **first place** for developing the "**Planto**" responsive website using HTML, CSS, JavaScript, and Bootstrap.

Second place - silver medal

2023/09

IoT Summer Training Competition

- Awarded a **silver medal** for building the "**Squid Game**" **robotic system** using Arduino, ultrasonic sensors, and mobile app control.

Certificates

The Frontend Developer Career Path - Scrimba & MDN

Completed the MDN Frontend Developer Career Path, gaining hands-on experience with React, JavaScript, semantic HTML, CSS, accessibility, and modern tooling. Built multiple portfolio projects and solved 100+ coding challenges to become job-ready as a frontend developer.
